Staff and students want to feel secure and at ease while on campus, both physically safe and mentally secure knowing building and technology systems work when needed. Ivy Tech Columbus Moravec Hall's approach to the physical side of security includes access control on all doors, exterior and interior, and CCTV cameras throughout the building. The Avigilon access control system is a cloud-based solution that allows facility managers to set times for certain doors to be open to the public while other doors are restricted access via fob or cell phone app. ERMCO's experts worked with the college to assess and implement the options that best fit their needs, providing the assurance and confidence that come with reliable technology and ERMCO's ongoing support.
