

YOUR PARTNER FOR **HEALTHCARE** DESIGN & CONSTRUCTION

Our work in the healthcare market allows us to help organizations provide leading-edge medicines and treatments. It requires an extensive level of knowledge and experience with an understanding of patient safety, life-cycle costs and the challenges of working daily in a healthcare environment.

PROACTIVE, FOCUSED APPROACH BASED ON EXPERIENCE

Our team is skilled at balancing the challenges presented by healthcare construction, which often include compressed timelines, tight spaces and sites, and facilities that continue to serve patients throughout construction.

By focusing on communication, maximizing efficiencies with fabrication, strategic planning and crew organization, we provide a smooth and productive experience for the client, medical staff, patients and our fellow contractors.

INTEGRATED SYSTEMS, IMPROVED RESOURCE MANAGEMENT

Reliable systems and technology are the heart of a healthcare facility, enabling staff to perform optimally and ensuring patient well-being. As a systems integrator, ERMCO can help you better manage your building systems – whether security, access control, HVAC, lighting, refrigeration or blanket warmer systems – by bringing them together into one web-based platform.

We help you choose the right control devices and systems to meet your facility needs. You get an integrated system that allows your infrastructure, technology and people resources to work together as sustainably and as efficiently as possible.

CONSTRUCTING HEALING, LIFE-SAVING ENVIRONMENTS

ERMCO is an industry leader in planning, coordinating and installing complex systems for healthcare institutions. We have worked with clients such as IU Health, Ascension Health, Community Health, Mount Carmel Health and Franciscan Health on thousands of projects.

We have the qualified staff and the project experience required to meet the complexities and rigorous requirements of healthcare environments, whether it's new construction or renovation of an operational facility. You get facilities with integrated systems that maximize your ability to provide healing, life-saving services.

OVER 60 YEARS OF HEALTHCARE EXPERIENCE

"I remain overwhelmingly pleased with each project connected with ERMCO. From beginning to end, the culture of ERMCO has always been one of professionalism, trust and reliance on great relationships with their clients. These strengths seem to extend through the whole company."

Donnie Reed - Former Interim Director of Operations - Riley Hospital for Children

CINCINNATI CHILDREN'S CRITICAL CARE EXPANSION

The 224-bed tower includes a 90,000-square-foot emergency department as well as a pharmacy, wet labs, central sterile department, NICU, bone marrow transplant center, ORs, PICUs, and CICUs. The project was completed with over 30% MWBE project participation and workforce inclusion.

The Center provides a new model of coordinated care that treats mother and baby as one patient and surrounds them with the medical support they need. Able to accommodate 3,800+ deliveries each year, it houses the largest number of neonatal intensive care unit (NICU) beds in Indiana.

RILEY HOSPITAL MATERNITY & NEWBORN CENTER

An expansion of Mount Carmel's Grove City Campus, the new-build, 650,000-squarefoot hospital is seven stories tall with 184 patient rooms and outpatient clinical services. The project was BIM coordinated with the use of iPads on site and included 52 multi-trade fabricated racks.
