

YOUR PARTNER FOR **INDUSTRIAL** DESIGN, CONSTRUCTION & MAINTENANCE

As manufacturing, distribution and logistics processes continue to become more advanced, reliable design and installation partners are more important than ever. The ERMCO team is committed to contributing innovative solutions through design, construction, commissioning and maintenance.

PROACTIVE, FOCUSED APPROACH BASED ON EXPERIENCE

Our team is skilled at balancing the challenges presented by manufacturing, distribution and logistics construction, which often include compressed timelines, complex systems, and facilities that need to maintain operation throughout construction.

By focusing on communication, maximizing efficiencies with fabrication, strategic planning and crew organization, we provide a smooth and productive experience for the client, staff, and our fellow contractors.

INTEGRATED SYSTEMS, IMPROVED RESOURCE MANAGEMENT

As manufacturing and distribution continue to become more globalized, managing industrial facilities presents new challenges. Systems are more complex. Customers expect product faster. As a systems integrator, ERMCO can help you better manage your building systems – whether security, access control, HVAC, lighting, or refrigeration – by bringing them together into one web-based platform.

We help you choose the right control devices and systems to meet your facility needs. You get an integrated system that allows your infrastructure, technology and people resources to work together as sustainably and as efficiently as possible.

MAKING QUALITY & SAFETY TOP PRIORITIES

We know quality and safety are top priorities for our clients and they are for us as well. We are constantly developing ideas, piloting methods, and trying new technology that will speed up installation times, improve quality, and increase safety. Our team is always thinking of new ways to solve project challenges.

Using skilled union electricians and technicians, together with experienced project management staff, we deliver high-quality installations that meet the complexities and rigorous requirements of industrial environments while maintaining the highest level of safety for our team and yours.

OVER 60 YEARS OF INDUSTRIAL EXPERIENCE

"ERMCO has partnered with us on many e-commerce distribution and fulfillment centers. They have proven to be true partners in the design and construction of these facilities. ERMCO's preconstruction, management, and field personnel are knowledgeable, responsive, flexible, and work well in a collaborative, fast-paced environment"

Jared Laub - Partner/Project Executive -Compass Commercial Construction Group

Park 100 Foods, the largest craft food maker in the world, has three major locations in Indiana that ERMCO have provided services for over 30 years. In the last year, ERMCO assisted Park 100 in replacing the conveyor control and the refrigeration control system loop – completing all of the control wiring, electrical, and low voltage for the project.

Amazon's 550,000-square-foot fulfillment center in Whiteland, IN, was constructed within three months. ERMCO's experience enabled accurate electrical planning and pricing and the opportunity to order and install equipment and materials on a fast-track schedule.

Phase III was an addition to the existing uranium enrichment plant in Eunice, NM. The project included multiple new construction buildings tying into existing structures as well as utilities and infrastructure. ERMCO completed the electrical and systems install for the project, including specialized equipment power and critical alarm systems.
